Promotion Conditions

Promotional discount cannot be combined with the purchase agreement discount. This promotion cannot be combined with any other current promotions or special offers. Customers must reference the promotion code upon order placement. The order quantities for dissoGUARD systems must be equivalent to the order quantities of the 708-DS dissolution apparatus. Agilent reserves the right to modify or discontinue this offering, during the promotional period.

About dissoGUARD

Using a camera placed beneath each vessel, dissoGUARD requires no additional bench space. In addition, an external camera is employed for an alternate view, determined at your discretion.

The dissoGUARD software gives you a real-time view as well as preset recording options. The videos or snapshots can be marked with key events such as dosage introduction, sampling, or unusual behavior, and then easily exported for sharing or documentation purposes.

Each camera does more than simply record events, but can also provide information regarding key physical parameters such as RPM, vessel-to-shaft centering, and wobble. The dissoGUARD PRO software alerts you of any abnormal status of these parameters during a test, preventing lost time and aiding in any failure investigation.

An innovative lighting system using white/red LEDs that are manually or automatically adjusted to red lighting allow you to observe light-sensitive products as well.

Overview software features

	dissoGUARD PRO
Real time preview of 6/7 vessels	✓
Acquire video for 6/7 vessels	✓
Preview and export of video for 6/7 vessels	✓
Dynamic LED (white/red) illumination for 6/7 vessels	✓
Motion detector	✓
Light Shield around the bath	Optional
RPM measurements	✓
Wobble detection	✓
Detection of vessel/shaft centering	✓
Vibration/level sensor	Optional
