Your Lab's Most Valuable Partner

Andrew+ the Pipetting Robot ensures reproducible and fully traceable experiments by automating tasks – from repetitive, time-intensive pipetting to complete laboratory workflows – using conventional pipettes and labware.

SLAS NPA DESIGNATION 2019
Andrew Alliance

Standard Curve
Create a series of standards of increasing concentration in order to produce a calibration curve.

Serial Dilution
OneLab™ calculates required volumes and concentrations, taking full account of sample viscosity and dilution of samples.

### Concentration Normalization
OneLab's Normalization Wizard automates the production of concentration normalization volumes, typically saving >80% time required for what is often a highly laborious process.

Microplate Reformatting
The Andrew+™ Pipetting Robot is equipped to handle a wide range of aliquoting operations between different types of microplate, microtube, vials, and racked HPLC tubes.

ANTIBODY PURIFICATION

AMINO ACID ANALYSIS

RELEASED N-GLYCAN ANALYSIS

mAb SUBUNIT ANALYSIS

OneLab ⊹
design & execute

OneLab enables researchers to design, share, and execute protocols, through an intuitive graphical interface. Use drag-and-drop to design new protocols on any PC or tablet, from anywhere. Execute step-by-step experiments to ensure repeatability with full traceability.
