Sample Preparation

Goals of Sample Preparation

Successful sample preparation for most analytical techniques (HPLC, UPLC™ LC-MS, UV, GC, etc.) has three primary objectives. It needs to provide the sample component of interest:

- In solution
- Free from interfering matrix elements
- At a concentration appropriate for detection or measurement

Waters™ Sample Preparation Solutions make it easy to produce samples that are free of matrix interferences, leading to more robust and predictable analytical results. Based on simple, logical workflows that produce cleaner samples through targeted separations, Waters Sample Preparation Products maximize sensitivity, increase throughput, and enable the development of robust methods.

Benefits of Solid-Phase Extraction

Solid-phase extraction (SPE) is a sample preparation technology that uses solid particle, chromatographic packing material contained in a device to chemically separate the different components of a sample. It is used across many different industries and application areas to ensure that the sample of interest is in an appropriate state of cleanliness and concentration to achieve successful analytical results for a variety of analytical measurement techniques.

While there are many reasons for using SPE, there are several major benefits that SPE provides:

- Simplification of complex sample matrix - SPE separates the compound of interest from matrix interferences that make accurate and reproducible analysis difficult to obtain
- Reduce ion suppression or enhancement in MS applications - SPE provides cleaner sample extracts resulting in improved MS-signal response and overall method robustness
- Trace enrichment of very low level compounds - SPE provides the ability to concentrate specific compounds of interest in a sample to improve method sensitivity and detection limits
- Ability to fractionate compounds by class from a sample matrix - SPE can target and isolate specific classes of compounds depending on the needs of the analysis
- Improve robustness of analytical methods - SPE provides a cleaner sample extract that translates directly to more robust and reproducible analytical results
- Increase column lifetime - SPE removes matrix interferences which can accumulate on chromatographic columns and cause poor lifetime and premature column failure

Selecting the Correct SPE Format

Formats	
μElution Plates	<ul style="list-style-type: none">■ Patented μElution™ plate design.■ Ideal for SPE cleanup and analyte enrichment of sample volumes ranging from 10 µL to 375 µL.■ No evaporation and reconstitution necessary due to elution volumes as low as 25 µL.■ Up to a 15X increase in concentration.■ Compatible with most liquid-handling robotic systems for automated, reliable, high-throughput SPE (HT-SPE). 
96-well Extraction Plates	<ul style="list-style-type: none">■ Innovative, award-winning, two-stage well design.■ High throughput and high recovery.■ Available with 5 mg, 10 mg, 30 mg, and 60 mg of sorbent per well.■ Compatible with most liquid-handling robotic systems for automated, reliable, high throughput SPE (HT-SPE). 
Syringe-barrel Cartridges	<ul style="list-style-type: none">■ Ultra-clean syringe barrel and frits.■ Available with cartridge sizes ranging from 1 cc/10 mg up to 35 cc/6 g.■ Flangeless syringe-barrel cartridges available in 1 cc, 3 cc, and 6 cc configurations. 
Luer-tip Plus Cartridge (Format)	<ul style="list-style-type: none">■ Plus-style cartridge with Luer inlet hub easily attaches to a syringe.■ Allows for easy SPE without the need for a vacuum manifold.■ Available in many sorbent types and specialty chemistries. 
Glass Cartridges	<ul style="list-style-type: none">■ Ultra-clean glass syringe with Teflon frit.■ For trace level detection and analysis at part-per-trillion levels.■ Available in 5 cc with 200 mg of sorbent configuration. 
On-line Columns and Cartridges	<ul style="list-style-type: none">■ For rugged, reproducible, and ultra-fast online analysis.■ Wide choice of configurations, particle sizes, and sorbent chemistries.■ Available with six, patented, Oasis™ Sorbents—HLB, PRiME HLB, MCX, MAX, WCX, and WAX.■ High recovery and reproducible results for a wide range of compounds.■ Cartridge format for use with Spark Holland Prospekt-2/Symbiosis systems also available. 

Sorbent Amount and Solvent Selection for the Generic SPE Method

The suggested amount of sorbent in a cartridge or a plate required for your application is given in the table to the right. Due to the increased capacity of the Oasis sorbents, you can use less sorbent than you would normally need if you used a silica-based packing. When converting from C₁₈ silica-based sorbents to Oasis SPE Sorbents, use approximately two-thirds less Oasis sorbent (100 mg C₁₈ sorbent = 30 mg Oasis sorbent).

Capacity and Elution Volume of Oasis 96-well Plates and Cartridges			
Sorbent Per Device	Maximum Mass Capacity	Typical Sample Volumes	Elution Volume
2 mg (μ Elution Plate)*	60–400 μ g	10–375 μ L	25 μ L**
5 mg*	0.15–1 mg	10–100 μ L	\leq 150 μ L
10 mg	0.35–2 mg	50–200 μ L	\leq 250 μ L
30 mg	1–5 mg	100 μ L–1 mL	\geq 400 μ L
60 mg	2–10 mg	200 μ L–2 mL	\geq 800 μ L

* Available only in 96-well plate formats.

** μ Elution Plate requires no evaporation step.

DID YOU KNOW...

Sample Pretreatment Suggestion

Applying one or more of the following steps before loading your sample may improve your results:

1. Dilute sample 1:1 with buffer to improve flow during loading
2. Dilute 1:1 or greater with 4% phosphoric acid or other acids
3. Filter through 0.45 μ m membrane
4. Centrifuge @ \geq 3000 rpm

Tips for Selecting Elution Solvents for the Generic SPE Method (I-D)* The elution solvent is selected based on polarity of analyte.

Solvent	Solvent Type	Relative Elution Strength**	Comments
Methanol	Proton donor	1.0	Disrupts H-bonding
Acetonitrile	Dipole-dipole	3.1	Medium polarity drugs
Tetrahydrofuran	Dipole-dipole	3.7	Medium polarity drugs
Acetone	Dipole-dipole	8.8	Medium polarity drugs
Ethyl acetate	Dipole-dipole	High	Non-polar drugs and GC compatible
Methylene chloride	Dipole-dipole	High	Non-polar drugs and GC compatible

* When using solvents other than methanol, add 10–30% of proton donor solvent such as methanol to disrupt H-bonding on the Oasis HLB sorbent.

** High-Purity Solvent Guide. Burdick and Jackson Laboratories, Inc. Solvent Properties of Common Liquids, L.R. Snyder, J. Chromatogr., 92, 223 (1974); J. Chromatogr. Sci. 16, 223 (1978).

APPLICATION AREA: Sample Preparation for Analysis of THC and Metabolites in Whole Blood from Impaired Drivers

"After evaluating many of the SPE products currently on the market on the criteria of recovery, matrix cleanup, ease of use, and cost, Oasis PRIME HLB μ Elution plate by far is the best option for the analysis of drugs of abuse in whole blood samples. Waters provided excellent support through application notes, in-person training and method development, troubleshooting, and equipment support throughout the optimization and validation process. The μ Elution plates demonstrate excellent reproducibility, recovery, and matrix cleanup, even with a complex matrix such as whole blood. The 96-well plate form factor will support a lot of scalability for our lab as we receive additional samples, and the Waters positive pressure manifold makes sample processing extremely easy and rapid. Overall, a great system for tricky analytes and matrices!"

REVIEWER: David Patlak

ORGANIZATION: Vermont Forensic Laboratory

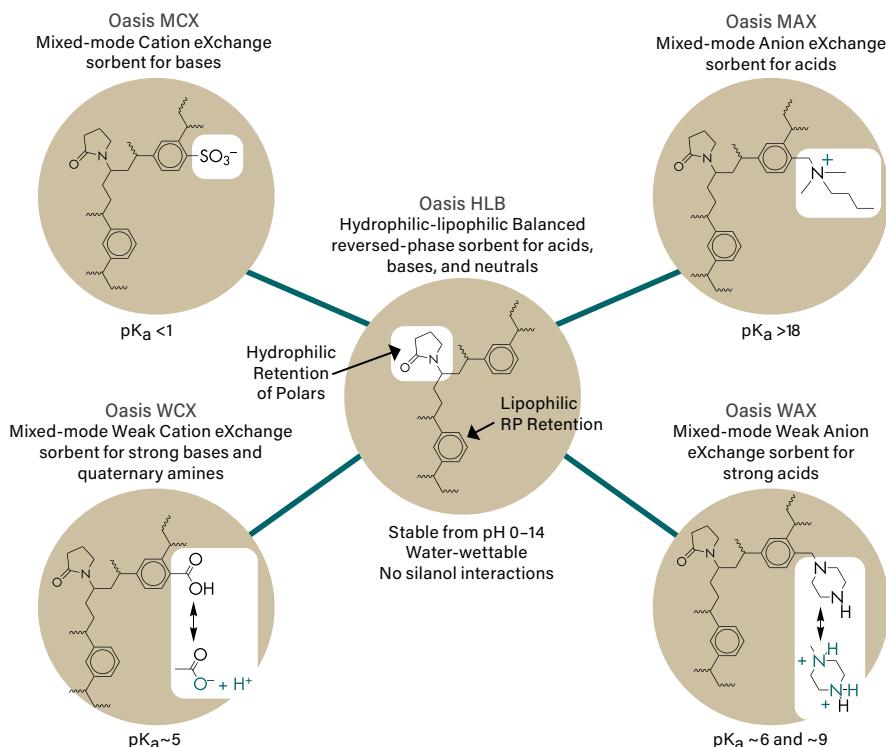

Oasis Solid-Phase Extraction (SPE) Products

Waters introduced Oasis HLB in 1996, effectively changing the way scientists performed SPE. Constructed with a water-wettable copolymer that is stable from pH 0–14, Oasis HLB created a whole new range of solid-phase extraction method development possibilities. It is the gold standard in SPE, trusted by scientists around the world.

The Oasis SPE Family of Sorbents

As a unique, water-wettable polymeric sorbent, Oasis products can be used without the conditioning and equilibration steps required by other polymeric and silica-based sorbents. Historically, those steps were required to obtain retention of analytes by reversed-phase SPE. The water-wettable nature of Oasis sorbents allows direct loading of aqueous samples without sacrificing recovery.

Oasis HLB is the backbone of all Oasis sorbents. It is a multi-purpose, reversed-phase sorbent that provides high capacity for a wide range of compounds.

Oasis PRiME HLB* was designed to make solid-phase extraction easy to implement into routine laboratory use by providing generic, simple methods that remove 95% of common matrix interferences such as phospholipids, fats, salts, and proteins. It produces the cleanest sample eluates with a simple, two- or three-step protocol.

Oasis PRiME MCX* combines the simplicity and cleanliness of Oasis PRiME HLB with the specificity of a cation-exchanger for compounds with basic characteristics, and provides the perfect solution for targeted sample cleanup.

Analyte specificity and sensitivity can be increased by using a **Mixed-Mode Oasis** sorbent, which includes both reversed-phase and ion-exchange functionality for orthogonal sample preparation.

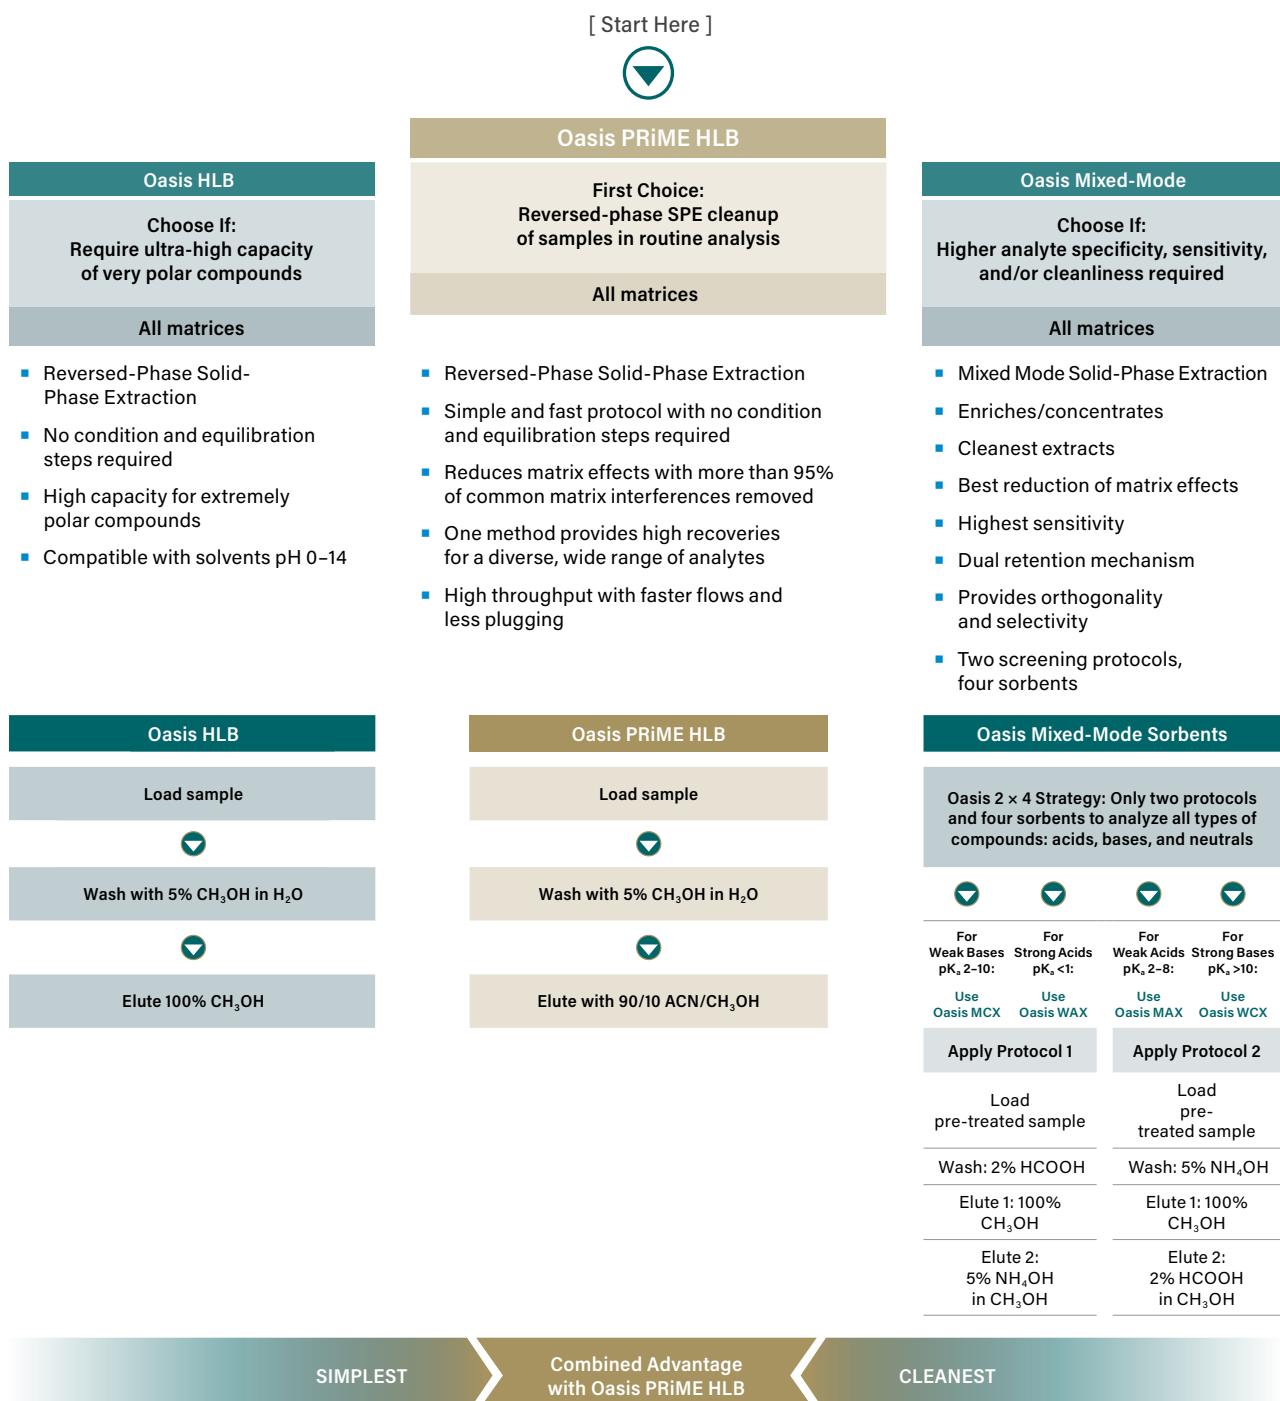

*Oasis PRiME HLB is a proprietary, patent-pending sorbent. Oasis PRiME HLB and MCX have application patents pending.

A BREAKTHROUGH IN SPE

Through the combination of innovative sorbent technology and hardware design, Oasis products have become the first choice in solid-phase extraction (SPE). Oasis products are trusted by separation scientists across the globe to meet a wide variety of sample preparation needs, ranging from a simple and fast matrix cleanup to the need to solve the most difficult and highly selective sample preparation challenges. Researchers rely on the superior technical performance of Oasis products to achieve unmatched purity, consistency, and quality in their sample preparation methods.

What Is the Ideal SPE Method?

- ✓ Easy to implement
- ✓ Reproducible and robust
- ✓ Fast
- ✓ Achieves your goals

i For an additional level of phospholipid clean-up for basic analytes, Oasis PRiME MCX is recommended.

Simplifying Solid-Phase Extraction

Traditionally, solid-phase extraction methods have required condition and equilibration steps to prepare the sorbent for sample introduction. The condition step was required to wet the sorbent and allow liquid to enter the pores, enabling retention within the sorbent. Once wetted, the sorbent needed to be equilibrated with aqueous solution to prepare it for aqueous sample loading. Since Oasis HLB is a water-wettable sorbent, the analytes can interact with the sorbent and are retained when loaded directly onto the sorbent in an aqueous sample solution. This eliminates the condition and equilibration steps from the traditional solid-phase extraction protocol and reduces the number of processing steps from 5 to 3. The result is an average reduction in solvent consumption of up to 70% and a 40% savings in sample preparation time.

The ability to simplify and shorten SPE protocols is due to the unique water-wettable, balanced nature of the hydrophilic/lipophilic Oasis sorbent.

²30 mg for Oasis HLB.

Save Time and Solvent by Moving from a 5-Step Protocol to a 3-Step

Traditional 5-step SPE protocol vs. the 3-step SPE protocol using an Oasis HLB µElution Plate. (Typical loading range between 10–375 µL undiluted plasma.)

OASIS PRIME HLB

Oasis PRIME HLB is the first-of-its-kind SPE sorbent that sets the new performance standard for routine analyses. The unique, patent-pending Oasis PRIME HLB sorbent provides cleaner samples in less time and with less effort.

- Removes 95% of common matrix interferences such as salts, proteins, and phospholipids
- Ability to concentrate analytes
- Faster, more predictable analysis times
- Directly load pre-treated samples without conditioning and equilibration

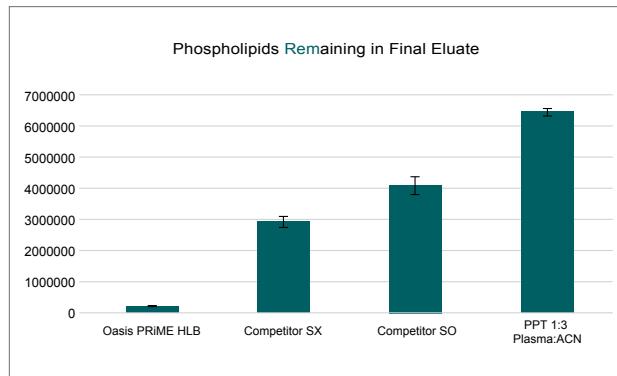

Simpler: Easy, efficient protocols

The Oasis PRIME HLB copolymer is extremely water-wettable, making it possible to eliminate the condition and equilibration steps that are absolutely essential when using silica-based or other polymeric sorbents. This saves valuable sample processing time and costly solvent purchase and disposal.

Faster: More even flows across cartridges and plates with less plugging

Oasis PRIME HLB has been designed to increase speed within the device and in your workflow. Flow times through the device are 30–50% faster for urine and plasma. Desired flow rates are achieved using less vacuum or positive pressure than required with other SPE devices.

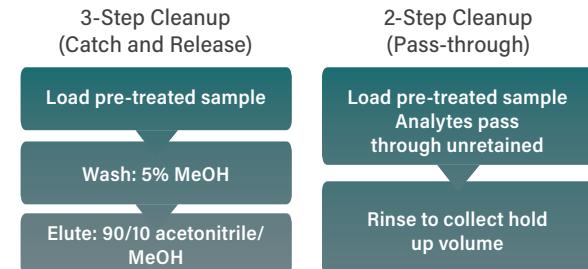

Protocol Phospholipids Remaining in Final Eluate

Fewer phospholipids remain in the final sample eluate with the Oasis PRIME HLB sorbent and 3-step protocol, compared to the final eluates using traditional 5-step protocol on the competitors' sorbents or protein precipitation (PPT). This removal is also more reproducible with Oasis PRIME HLB as indicated by the error bars ($n=5$).

Even Cleaner: The optimally designed sorbent removes more than 95% of common matrix interferences like proteins, salts, fats, and phospholipids

Choose the sample preparation method that meets your analytical needs.

Use 3-step solid-phase extraction to remove the most matrix interferences, including salts, phospholipids, and proteins. This technique also allows for sample concentration/enrichment. Perfectly suited for routine bioanalytical sample cleanup.

Use 2-step sample cleanup to remove matrix interferences quickly if your beginning sample solution is high organic, and concentration and/or salt removal is not required. Perfectly suited for multiple residue veterinary drug screening in meats.

DID YOU KNOW...

Oasis Cartridges and Plates are available in two particle sizes (30 μ m and 60 μ m).

This allows you to select the appropriate product based on the viscosity and turbidity of your sample. For extraction of most plasma, serum, and human urine, choose the 30 μ m sorbent. For more viscous samples such as animal urine, excellent flow can be achieved using the 60 μ m sorbent in either cartridges or plates.

OASIS PRIME MCX

Oasis PRiME MCX is a highly efficient, orthogonal (reversed-phase and ion-exchange) solid-phase extraction product based on Oasis MCX technology.

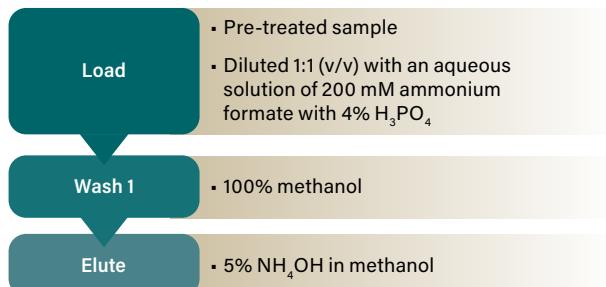

SIMPLER: A defined, generic 3-or 4-step SPE protocol based on the water wettable Oasis MCX strong cation-exchange/reversed-phase sorbent that does not require extensive method development. It allows targeted cleanup of basic compounds with $pK_a \geq 4.5$. Methods are patent pending.

CLEANER: Simpler methods remove up to 99% of phospholipids, a major cause of matrix effects, ion suppression, shorter column lifetimes, increased MS maintenance, and higher variability in LC-MS quantification. Oasis PRiME MCX is QC tested with this protocol for phospholipid removal.

FASTER: Cartridges and plates are designed with a manufacturing optimization to increase flow reproducibility across devices, making processing time more predictable. No conditioning and equilibration steps are required.

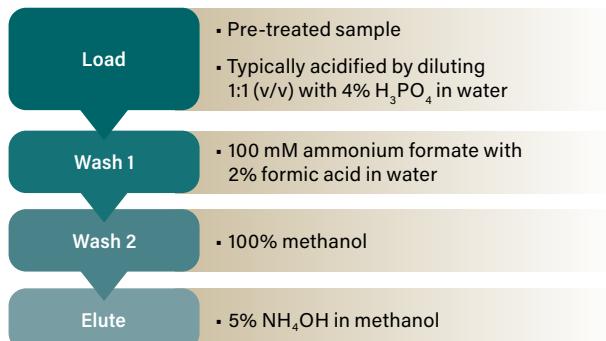

Oasis PRiME MCX 3- and 4-Step Protocols

3-Step Oasis PRiME MCX Protocol*

* The sample is diluted 1:1 with 200 mM ammonium formate with 4% H_3PO_4 , making a final concentration of 100 mM ammonium formate and 2% H_3PO_4 .

4-Step Oasis PRiME MCX Protocol**

** Contains an extra wash step that can be used to remove additional matrix interferences if needed.

Oasis PRiME MCX methods are designed to capture and concentrate basic compounds while matrix interferences are removed from the sample. The 3-step method provides the simplest path to cleaner, while the 4-step method contains an additional wash step to remove even more matrix components, if needed.

OASIS MCX FOR BASIC COMPOUNDS

Obtain selective retention of basic drugs with cation-exchange groups on the sorbent surface. The Oasis MCX (Mixed-Mode Cation eXchange) Sorbent has a tightly controlled ion-exchange capacity (1 meq/g). There are no silanol groups to complicate the retention mode or method development. This novel, water-wettable, polymeric sorbent is stable from pH 0–14, making method development simple and fast.

APPLICATION AREA: Peptide Desalting and Enrichment

"The best part of (Oasis) PRiME line products is being able to load samples directly without pre-conditioning, which saves time and solvent. It is more "GREEN" than other products."

REVIEWER: Hui Chen

ORGANIZATION: University of Illinois at Chicago

OASIS MAX FOR ACIDIC COMPOUNDS

The Oasis MAX (Mixed-Mode Anion eXchange) sorbent has a tightly controlled ion-exchange capacity of 0.25 meq/g, ensuring reproducible SPE protocols for extraction of acidic compounds and metabolites from biological fluids. There are no silanol groups to complicate the retention mode or method development. This novel, water-wettable, polymeric sorbent is stable from pH 0-14, making method development simple and fast.

DID YOU KNOW...

When compared to other sample preparation techniques, SPE offers:

- Faster sample prep
- Compatibility with high throughput
- Greater recoveries
- Greater accuracy
- Powerful enrichment of analytes
- Additional selectivity and specificity

OASIS WCX FOR STRONG BASIC COMPOUNDS

The Oasis WCX (Weak Cation eXchange) SPE material provides better sample preparation for strong bases and quaternary amines. The retention mechanism is mixed mode (both ion exchange and reversed phase), which improves retention for all types of basic analytes, especially strong bases.

Oasis 2 x 4 Method Development Protocol

OASIS SORBENT SELECTION TOOLS FOR CONVENIENT METHOD DEVELOPMENT

The Oasis Sorbent Selection Plate and Cartridge Kits enable rapid development of SPE methods for LC-MS analysis. Having all four Oasis ion-exchange sorbents (MCX, MAX, WAX, and WCX) in a single plate or a cartridge kit is convenient for scouting the best methods to accomplish efficient isolation of unknown analytes, zwitterionic compounds, or mixtures of analytes with different retention/elution properties.

XBRIDGE OSM CARTRIDGES

The XBridge™ C₁₈ and C₈ sorbents use Waters' proprietary Ethylene Bridged Hybrid (BEH™) Technology to produce a sorbent with high mechanical strength and excellent stability for reversed-phase separations. These sorbents can provide separations with superior peak shape and high efficiency.

SPE COLUMNS FOR WATERS UPLC WITH ON-LINE SPE TECHNOLOGY

UPLC with On-Line SPE Technology combines automated sample handling, chromatographic media, and ultra-sensitive optical and mass spectrometry detection into an on-line SPE-LC-MS/MS solution. When paired with one of the three UPLC pressure-enabled on-line SPE column chemistries, you have the ability to extract a wide range of analytes.

This proven system and column chemistries dramatically streamlines the analysis of drinking water samples by providing analyte extraction, concentration, separation, and detection in one turnkey solution.

OASIS GLASS CARTRIDGES FOR PPT DETECTION LEVELS

Oasis Glass Cartridges are available in a 5 cc (200 mg) configuration with Teflon Frits for trace analysis at parts per trillion (PPT) levels. Each lot is tested for the presence of bisphenol A and other phenols and phthalates, assuring that endocrine disruptors in water samples can be analyzed to PPT levels.

Ostro Pass-Through Sample Preparation Product

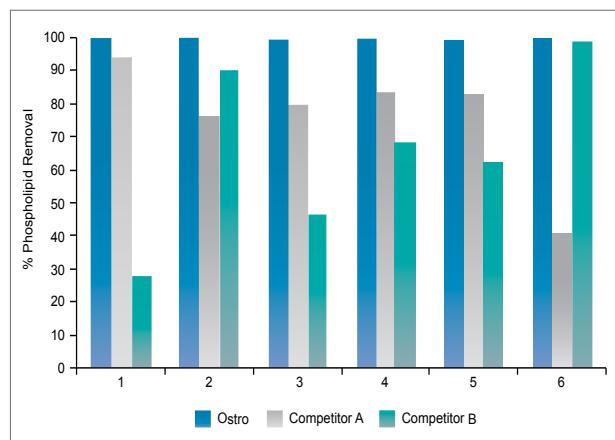

The Simplest Way to Cleaner Samples: Ostro™ Pass-through 96-well Plate provides a novel solution for cleanup, requiring minimal-to-no method development, using a combination of filtration and sorbent interactions to produce cleaner samples in less time.

- Pass-through sample preparation technique
- Removes 95% of phospholipids and proteins
- For reproducible, consistent, and robust methods
- Increases throughput with easy-to-implement protocol

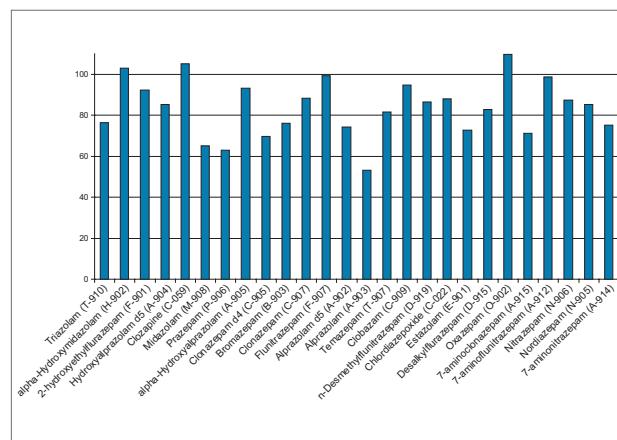

Reproducibility

Comparative % removal of total phospholipids from six different lots of plasma using the Ostro (0.19% RSD), phospholipid removal plate from competitor A (24.5% RSD) and phospholipid removal plate from competitor B (40.9% RSD).

Recovery

The Ostro Plate can be used with its standard protocol in a drug discovery setting for rapid sample cleanup. In this example, proteins and the vast majority of phospholipids were removed from a sample containing 26 structural analogs and metabolites while maintaining high analyte recovery.

Increased Instrument Uptime

Phospholipids can build up on your LC column and MS system. This leads to unpredictable, inaccurate results and necessitates extensive system cleaning and instrument downtime. Removing these contaminants before they enter your system provides increased instrument robustness, improved results, and maximum laboratory efficiency.

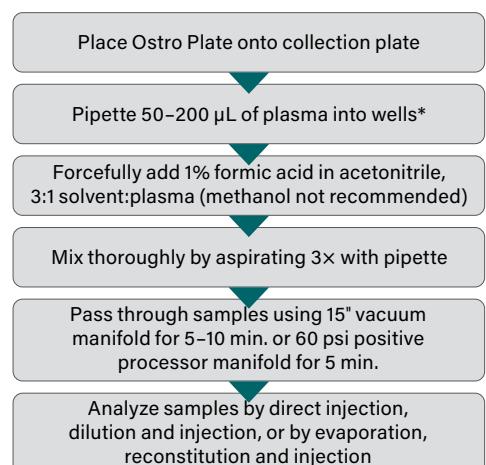

Ordering Information

Ostro Pass-Through Sample Preparation Plate

Description	Qty.	P/N
Ostro Protein Precipitation and Phospholipid Removal Plate, 25 mg	1/pk	186005518

Protocol

Minimizing method development time, the standard Ostro protocol will provide excellent results for a wide variety of acidic, basic, and neutral compounds.

*For sample volumes 50 µL or less, a higher solvent to plasma ratio may be necessary.

Sep-Pak Solid-Phase Extraction (SPE) Products

The Most Referenced and Widely Used Sample Preparation Technology

Sep-Pak™ devices are recognized throughout the world and remain the most referenced SPE product for sample preparation. A diverse selection of formats and sorbents make Sep-Pak SPE Products ideally suited for all types of samples for GC, HPLC, and UPLC analysis methods.

Formats:

- Cartridges in both Vac syringes and Plus format devices
- 96-Well plate
- μElution plate

Chemistries:

- Reversed-Phase (silica-based)
- tC₂-bonded phase with low hydrophobic characteristics
- C₈-bonded phase with moderate hydrophobicity
- C₁₈-monofunctional bonded phase, a Waters original
- tC₁₈-tri-functional bonded phase with increased hydrolytic stability
- Reversed or Normal-Phase (less polar alternatives to silica)
- Amino Propyl (NH₂)-basic polar bonded phase
- Cyano Propyl (CN)-polar bonded phase
- Diol-neutral polar bonded phase
- PSA-Primary-Secondary Amine
- Normal-Phase
- Silica-polar surface used to adsorb analytes from non-polar solvents
- Alumina (A, B, N)-a highly active grade of alumina that is available in acidic, basic and neutral surface chemistries
- Florisil-polar, highly active, weakly basic sorbent for adsorption of low-to-moderate polarity species from nonaqueous solutions
- Ion-Exchange (silica-based)
- AccellPlus QMA-hydrophilic strong anion-exchanger with large pore size
- AccellPlus CM-hydrophilic weak cation-exchanger with large pore size
- Specialty
- PoraPak™ RDX-for analysis of explosives in ground and surface water, EPA-8330
- Sep-Pak Dry-anhydrous Na₂SO₄ for removal of residual water from non-aqueous extracts
- DNPH-Silica-for air analysis of aldehydes and ketones, EPA-TO-11A, ASTM D-5791
- XPoSure-for indoor air monitoring of aldehydes and ketones
- AC2-activated carbon used to concentrate pesticides and herbicides
- PS2-styrene-divinyl benzene polymer used to concentrate pesticides and herbicides
- Carbon Black/Amino Propyl-for pesticides from food
- Carbon Black/PSA-for concentrating pesticides from food
- Potassium Carbonate-for synthesis of radiopharmaceuticals

Sep-Pak Sorbent Selection Guide

Reversed Phase			
	Description	Applications	Properties
Sep-Pak C₁₈ Si(CH ₃) ₂ C ₁₈ H ₃₇	Hydrophobic, silica-based bonded phase used to adsorb analytes from aqueous solutions. Monofunctional bonding provides alternate selectivity versus tC ₁₈ .	<ul style="list-style-type: none"> ■ Lipid fractionation; ganglioside isolation ■ Organic acids in fruit juice, wine ■ JPMHLW and CDFA official methods for pesticides in food ■ Natural products ■ AOAC methods for food colors, sugars 	<ul style="list-style-type: none"> ■ Particle size: 55–105 µm ■ Pore size: 125 Å ■ Surface area: 325 m²/g ■ Carbon load: 12% ■ pH range: 2–8
Sep-Pak tC₁₈ SiC ₁₈ H ₃₇	Strongly hydrophobic, silica-based bonded phase used to adsorb analytes from aqueous solutions. Trifunctional bonding chemistry for increased hydrolytic stability.	<ul style="list-style-type: none"> ■ JPMHLW official methods for pesticides in water ■ JPMHLW official methods for odorants in water 	<ul style="list-style-type: none"> ■ Particle size: 37–55 µm ■ Pore size: 125 Å ■ Surface area: 325 m²/g ■ Carbon load: 17% ■ pH range: 2–8
Sep-Pak C₈ Si(CH ₃) ₂ C ₈ H ₁₇	Moderately hydrophobic, silica-based bonded phase used in methods when less retention than that of HLB or C ₁₈ is required.	<ul style="list-style-type: none"> ■ Drugs and their metabolites in biofluids ■ Peptides in serum and plasma 	<ul style="list-style-type: none"> ■ Particle size: 37–55 µm ■ Pore size: 125 Å ■ Surface area: 325 m²/g ■ Carbon load: 9% ■ pH range: 2–8
Sep-Pak tC₂ SiC ₂ H ₅	Weakly hydrophobic, silica-based bonded phase used in methods when less retention than that of C ₈ is required. Trifunctional bonding chemistry for increased hydrolytic stability.	<ul style="list-style-type: none"> ■ Applications are similar to those of C₁₈ and C₈ 	<ul style="list-style-type: none"> ■ Particle size: 37–55 µm ■ Pore size: 125 Å ■ Surface area: 325 m²/g ■ Carbon load: 2.7% ■ pH range: 2–8
Reversed or Normal Phase			
	Description	Applications	Properties
Sep-Pak Aminopropyl Si(CH ₂) ₃ NH ₂	Moderately polar, silica-based bonded phase with weakly basic surface. Can be used as a polar sorbent with different selectivity for acidic/basic analytes or as weak anion exchanges in aqueous medium below pH 8.	<ul style="list-style-type: none"> ■ Phenols, phenolic pigments, natural products ■ Petroleum fractionation ■ Saccharides ■ Drugs and drug metabolites ■ JPMHLW official methods for pesticides in food 	<ul style="list-style-type: none"> ■ Particle size: 55–105 µm ■ Pore size: 125 Å ■ Surface area: 325 m²/g ■ Carbon load: 3.5% ■ pH range: 2–8
Sep-Pak Cyanopropyl Si(CH ₃)(CH ₂) ₃ (CN)	Silica-based bonded phase with low hydrophobicity. Can be used as a less polar alternative to silica or as a less hydrophobic alternative to C ₁₈ or C ₈ .	<ul style="list-style-type: none"> ■ Drugs and their metabolites ■ Pesticides 	<ul style="list-style-type: none"> ■ Particle size: 55–105 µm ■ Pore size: 125 Å ■ Surface area: 325 m²/g ■ Carbon load: 6.5% ■ pH range: 2–8
Sep-Pak Diol Si(CH ₂) ₃ OCH ₂ CH(OH) CH ₂ OH	Moderately polar, neutral, silica-based bonded phase. Used in normal-phase applications where acidic character of silica is undesirable or as a weakly hydrophobic phase in aqueous media.	<ul style="list-style-type: none"> ■ Antibiotics in cosmetics ■ Protein and peptide isolation by HIC (hydrophobic-interaction chromatography) 	<ul style="list-style-type: none"> ■ Particle size: 37–55 µm ■ Pore size: 300 Å ■ Surface area: 100 m²/g ■ Carbon load: 2% ■ pH range: 2–8

ANATOMY OF SEP-PAK CARTRIDGES

The Anatomy of Sep-Pak Plus and Classic Cartridge Design

1. Female Luer inlet accepts male Luer tip. Plus cartridge design can be stacked.
2. Highest quality sorbents designed and made specifically for sample preparation; clean, dry, reproducible in activity and capacity with optimal surface area, pore, and particle size distributions.
3. Broad range of sorbent surface activities available; each lot is tested under rigid specifications for chromatographic activity, retention, and selectivity.
4. Sorbent type and bed dimensions equal to corresponding Sep-Pak Classic Cartridges enable direct transfer of previously developed and published methods to new Plus design.
5. Weight of sorbent in each cartridge is controlled within +/- 5% of specification to assure reproducible performance.
6. Advanced bed formation to minimize voids and channels. Patented* Radial Compression Technology used to form homogeneous packed bed free of voids and channels.
7. Special blend of HD and UHMW polyethylenes used for 20 µm frits imparts excellent solvent resistance, extremely low extractables level, and good flow properties. Frit also acts as depth filter for small amounts of sample debris.
8. Polyethylene body has excellent solvent resistance. All body parts are quality tested to verify extremely low level of UV-absorbing extractables. Plus design is molded for precise dimensions making it suitable for automated equipment.
9. Cartridges are sealed in a special polyfoil pouch to protect product integrity, sorbent activity, and purity.
10. Male Luer outlet has reduced internal volume for minimal sample hold up.
11. Color-coded ring compresses and seals the cartridge and identifies sorbent.

The Anatomy of Sep-Pak Vac and Vac RC Cartridge Designs

12. Highest quality sorbents design and made specially for sample preparation; clean, dry, reproducible in activity and capacity, with optimal surface area, pore, and particle size.
13. Broad range of sorbent surface activities available; each lot is tested under rigid specifications for chromatographic activity, retention, and selectivity.
14. Weight of sorbent in each cartridge is controlled within +/- 5% of specification to assure reproducible performance.
15. Special blend of HD and UHMW polyethylenes used for 20 µm frits.
16. Molded, medical-grade, polypropylene body.
17. Cartridges are sealed in a special polyfoil pouch to protect product integrity, sorbent activity, and purity.
18. Integral reservoir approximately 20 mL, robotic compatible.
19. Outlet make Luer tip.
20. Color-coded labeling in the cartridge to identify the sorbent.

*P.D. McDonald, C.W. Rausch, Radial Compression of Packed Beds, U.S. Patent #4,250,035 (1981); Great Britain # 1,568,700 (1976); Canada # 1,101,785 (1981); Japan # 1,400,983 (1987); Sweden # 450,750 (1987); Germany # 2,655,650 (1988); other patents pending.

GENERAL EXTRACTION PROTOCOLS FOR SEP-PAK CARTRIDGES

Normal-Phase Chromatography with Sep-Pak Cartridges

To perform normal-phase chromatography with Sep-Pak Cartridges, use a gradient of non-polar solvents with polar silica, florisil, NH₂, diol, CN, alumina A, B, or N as a sorbent*.

1. You may condition the cartridge with 6–10 hold-up volumes of non-polar solvent, usually the sample solvent.
2. Load the sample into the cartridge.
3. Elute unwanted components with a non-polar solvent.
4. Elute the first component of interest with a polar solvent.
5. Elute remaining components of interest with progressively more polar solvents.
6. When you recover all of your components, discard the used cartridge in an appropriate manner.

*Depending upon your chromatographic conditions, you may also use CN as a packing material for normal-phase chromatography.

Reversed-Phase Chromatography with Sep-Pak Cartridges

To perform reversed-phase chromatography with Sep-Pak Cartridges, use a gradient of strongly-to-weakly polar solvents with non-polar C₁₈, tC₁₈, C₈, tC₈, diol, NH₂, or CN as a sorbent.

1. Solvate the bonded phase with 6–10 cartridge hold-up volumes of methanol or acetonitrile. Flush the cartridge with 6–10 hold-up volumes of water or buffer. Do not allow the cartridge to dry out.
2. Load the sample dissolved in a strongly polar solvent.
3. Elute unwanted components with a strongly polar solvent.
4. Elute weakly held components of interest with a less polar solvent.
5. Elute more tightly bound components with progressively more non-polar solvents.
6. When you recover all of your components, discard the used cartridge in an appropriate manner.

Ion-Exchange Chromatography with Sep-Pak Cartridges

To perform ion-exchange chromatography with Sep-Pak Cartridges, use a gradient of pH or ionic strength with AccellPlus CM, AccellPlus QMA, or NH₂ as a sorbent.

1. Condition the cartridge with 6–10 held-up volumes of deionized water or weak buffer.
2. Load the sample dissolved in a solution of deionized water or buffer.

3. Elute unwanted weakly bound components with a weak buffer.
4. Elute the first component of interest with a stronger buffer (change the pH or ionic strength).
5. Elute other components of interest with progressively stronger buffers.
6. When you recover all of your components, discard the used cartridge in an appropriate manner.

General Elution Protocol for Normal-Phase Chromatography on Sep-Pak Cartridges (Silica, Alumina, Florisil, Diol, NH₂)

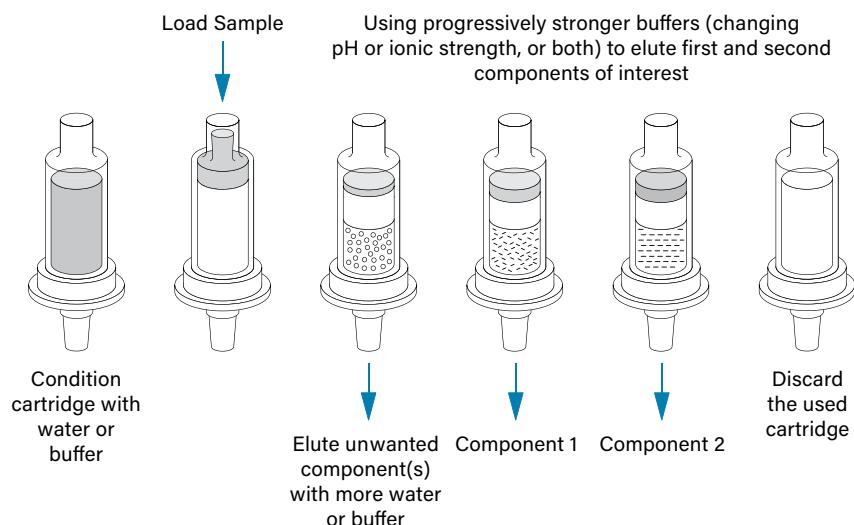

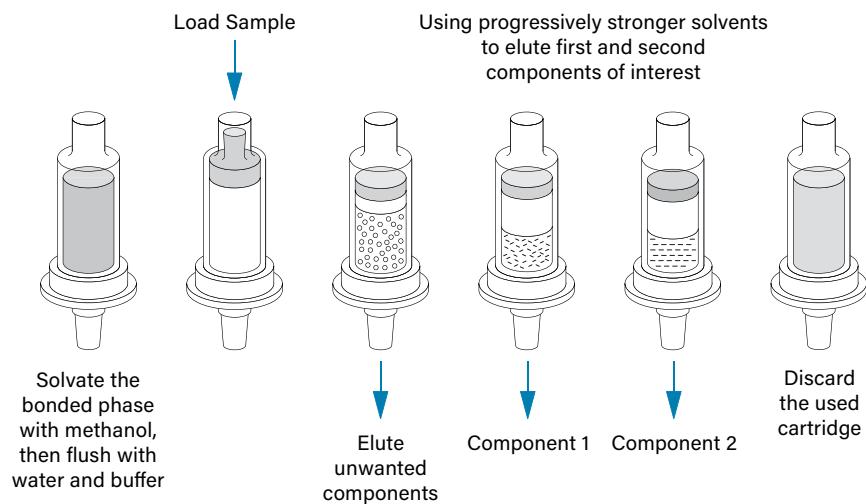

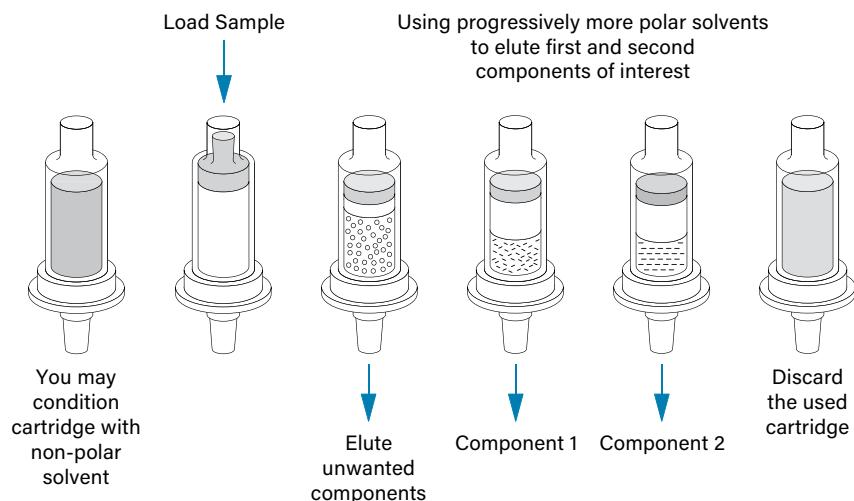

1. Load sample.
2. Use progressively more polar solvents to elute first and second components of interest.
3. You may condition cartridge with non-polar solvent.
4. Elute unwanted components.
5. Elute first component of interest (Component 1).
6. Elute second component of interest (Component 2).
7. Discard the used cartridge.

General Elution Protocol for Reversed-Phase Chromatography on Sep-Pak Cartridges (C₁₈, CN)

1. Load sample.
2. Use progressively stronger solvents to elute first and second components of interest.
3. Solvate the bonded phase with methanol, then flush with water and buffer.
4. Elute unwanted components.
5. Elute first component of interest (Component 1).
6. Elute second component of interest (Component 2).
7. Discard the used cartridge.

General Elution Protocol for Ion-Exchange Chromatography on Sep-Pak Cartridges (NH₂, AccellPlus QMA, AccellPlus CM)

1. Load sample.
2. Use progressively stronger buffers (changing pH or ionic strength) to elute first and second components of interest.
3. Condition cartridge with water or buffer.
4. Elute unwanted component(s) with more water or buffer.
5. Elute first component of interest (Component 1).
6. Elute second component of interest (Component 2).
7. Discard the used cartridge.

Advantages of Sep-Pak DNPH-Silica Cartridges

These cartridges provide you with significant advantages when compared to other techniques, such as liquid impingers, for the analysis of aldehydes and ketones. In addition, a new high speed, high resolution HPLC application has been developed to provide excellent quantitation capability in the low parts-per-billion range.

- Sep-Pak DNPH-Silica Cartridges meet the requirements of EPA Method TO-11A and ASTM-D-5791-1
- Results from impingers and these cartridges are in excellent agreement
- Solvent consumption, solvent exposure, and hazardous waste disposal costs are reduced
- Sep-Pak DNPH-Silica Cartridges provide superior convenience and reproducibility, making them ideal for field sampling and process monitoring applications
- Sep-Pak DNPH-Silica Cartridges can save time and increase productivity
- Increased safety

Ozone Scrubber Cartridges

Ozone has been shown to interfere with the analysis of carbonyl compounds in air samples that have been drawn through cartridges containing silica coating with 2,4-dinitrophenylhydrazine (DNPH). Ozone Scrubber Cartridges are designed to remove this ozone interference.

These disposable devices are intended for use in series combination with Sep-Pak DNPH-Silica Cartridges or XPoSure Aldehyde Sampler Cartridges.

Certified Sep-Pak Solid-Phase Extraction (SPE) Cartridges

As a pioneer in SPE, Waters has advanced SPE performance and quality by offering Certified Sep-Pak Sample Preparation Products. By manufacturing these devices to strict performance and cleanliness specifications, we ensure that the detection limits and performance of your analytical methods will not be compromised by interfering substances commonly found in SPE hardware.

Improve Workflow and Reduce Solvent Waste

Certified Sep-Pak Sample Preparation Devices are available in the most commonly used formats and sorbents to allow easy integration into your sample preparation protocol. Reduced background interferences reduce solvent waste by eliminating unnecessary solvent pre-washing steps that are often required for trace residue methods.

Manufacturing

Our world-class manufacturing facilities strive to improve quality expectations for SPE product performance. We manufacture under the highest quality standard in the industry including ISO 9001, ISO 13485, and current Good Manufacturing Practices (CGMP). Each Certified Sep-Pak product is thoroughly QC tested.

Sorbent specifications based on:

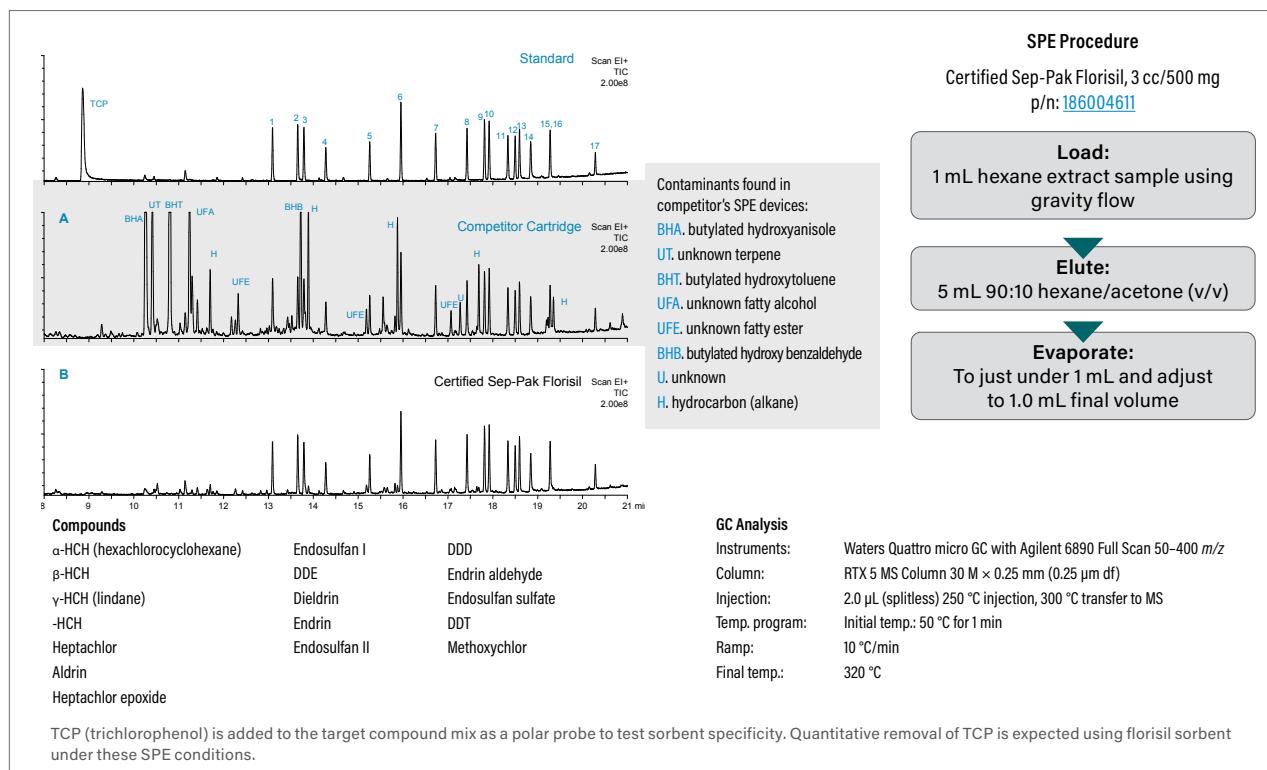

- Contaminants including hydrocarbons and other environmental contaminants
- Sorbent functionality including:
 - ligand density
 - particle size distribution
 - surface activity
- Chromatographic performance

Assembly specifications based on:

- Frit and barrel dimensional tolerance
- Chromatographic testing of total residual extractables including:
 - hydrocarbons
 - plasticizers
 - antioxidants
- Sorbent bed voiding
- Consistent sample flow characteristics

Comparison of Extracted Interference Levels in Organochlorine Pesticide Analysis at 1 ppm

CERTIFIED SEP-PAK SORBENT SELECTION GUIDE

C₁₈

- Silica-based, trifunctionally-bonded octadecyl sorbent
- High carbon load provides excellent hydrolytic stability for a wide range of samples
- Strong hydrophobic sorbent used to adsorb analytes of even weak hydrophobicity from aqueous solutions
- Typical applications include drugs and their metabolites in serum, plasma or urine; desalting of peptides; trace organics in environmental water samples; organic acids in beverages

Silica

- Unbonded, highly activated silica stationary phase
- A polar sorbent for analyte isolation from non-polar solvents like hydrocarbons and less polar esters and ethers
- Analyte retention can occur through hydrogen bonding or dipole-dipole interactions in non-aqueous samples
- Silica provides a slightly acidic surface for moderate cation-exchange interactions in aqueous samples
- Elution with more polar solvents like polar esters, ethers, alcohols, acetonitrile, or water

Alumina (A, B, N)

- Alumina is very similar to silica; however, the alumina surface tends to be slightly more stable under high pH conditions than unfunctionalized silica
- The aluminum oxide surface provides an extremely polar surface for analyte retention and has properties of a Lewis acid
- Depending on the sorbent's surface treatment, alumina is available in three forms: Alumina A, Alumina B, and Alumina N
- Alumina exhibits specific interactions with the π -electrons of aromatic hydrocarbons, making it useful for applications like crude oil fractionation
- Acidic and basic grades can be used as low-capacity ion exchangers

Florisil

- Very-polar, highly-active, weakly-basic sorbent for adsorption of low-to-moderate polarity species from non-aqueous solutions
- Specifically designed for the adsorption of pesticides using official AOAC, EPA, and JPMHLW regulated methods
- Applications include polychlorinated biphenyls (PCBs) in transformer oil

DID YOU KNOW...

Strategies for Isolating and Cleaning Up Analytes of Interest

Two general SPE strategies are implemented for isolating and cleaning up sample components of interest. A retention-cleanup-elution strategy is frequently used when the compounds of interest are present in levels too low for accurate and precise quantitation. Concentration of dilute samples and trace enrichment of compounds are achieved by this strategy. A pass-through cleanup strategy may be chosen when the desired sample component is present at a high concentration. However, no sample enrichment occurs when a pass-through cleanup strategy is used.

PoraPak Rxn Cartridges for Post-Synthesis Cleanup

PoraPak products are polymer based for superior cleanup of synthetic reactions. They are available in two chemistries:

- PoraPak Rxn CX (strong cation-exchange sorbent)
- PoraPak Rxn RP (reversed-phase sorbent)

PoraPak Rxn Sorbents are available in fritted, syringe-barrel devices in 6, 20, and 60 cc volumes. The resins are also sold in bulk units, and custom configurations are available on request.

New Solutions for Faster Results

PoraPak Rxn Sorbents are based on copolymers that exhibit these properties:

- Hard material that does not develop increasing back pressure with flow
- Little swelling or shrinking across a range of solvents and pH extremes
- Low hydraulic resistance enables flow by gravity
- pH extreme tolerance without dissolution or hydrolysis, both limitations of silica-based sorbents

This combination of physical and chemical properties makes PoraPak Rxn Cartridges ideal for synthesis cleanup. The polymers characteristics and particle size maintain gravity-, pressure-, or vacuum-assisted flow; even when reaction mixtures contain precipitate that may contribute additional resistance to flow. The sample will still pass through the cartridge.

The polymer used in PoraPak Rxn Products is resistant to shrinking or swelling in the organic solvents typically used in synthetic reactions. Tests with the following solvents demonstrate that the packed bed maintains good flow properties:

- | | |
|-------|-----------|
| ■ DCE | ■ THF |
| ■ DMF | ■ DMSO |
| ■ DCM | ■ Acetone |

Some medicinal chemists are familiar with silica-based chromatographic products for reaction cleanup. One of the limitations of these silica-based ion-exchange materials is pH. Silica will dissolve at high pH, while bonded phases are hydrolyzed at low pH; both conditions result in loss of sample and/or impurities (silica and bonded phase) collected in product fractions. PoraPak Rxn polymer-based chromatographic phases are stable at extreme pH. This feature permits using pH as a very powerful tool to create a separation, particularly in ion-exchange mode.

Providing Separations Solutions

Waters is highly respected worldwide for its expertise in chromatography. Coupled with our ability to seamlessly link critical instrumentation, chemistries, separation technologies, and software, this expertise puts us in a unique position to deliver value-added solutions to our customers.

Manufacturing

Our world-class manufacturing facilities are continuously expanded and upgraded to keep pace with market demand for our new and existing products. We manufacture under the highest quality standards in the industry, including ISO 9001, ISO 13485, and Current Good Manufacturing Practices (cGMP).

Vacuum Manifold and Accessories

VACUUM MANIFOLD FOR USE WITH SPE CARTRIDGES

The vacuum manifold has the capacity to process up to 20 samples simultaneously. The extraction manifold has enhanced features designed for use with conventional silica-based, SPE cartridges as well as modifications that allow you to take full advantage of the unique performance characteristics of our Oasis Extraction Cartridges.

This manifold offers:

- A. Precision-machined Delrin cover with alignment posts for quick and easy alignment with test tube rack.
- B. Vacuum gauge placement on cover, not in fluid path, allows for quick and easy waste removal at bottom by vacuum.
- C. Enhanced vacuum control valve designed for use with Oasis Extraction Cartridges, allows for a quick and momentary rise in vacuum above the frit bubble point at the touch of a finger.
- D. High-purity, polypropylene needle valves and needle tips with minimum dead volume (opening and closing the valves is required to prevent silica-based SPE cartridges from drying out).

DisQuE Sample Preparation Solutions for QuEChERS

QuEChERS (an acronym for Quick, Easy, Cheap, Effective, Rugged, and Safe) methods offer a simple and straightforward sample preparation technique ideal for multi-residue analysis for pesticides, veterinary drugs, and mycotoxins in a wide variety of food and agricultural products. DisQuE Dispersive Sample Preparation Products are conveniently packaged with pre-weighed sorbents and buffers in pouches and tubes as described in regulatory methods and protocols.

These products offer several advantages over traditional sample preparation techniques:

- Simplified QuEChERS protocols
- Decreased sample preparation time
- Efficient and cost-effective sample preparation
- Consistent, high-quality sorbents and packaging

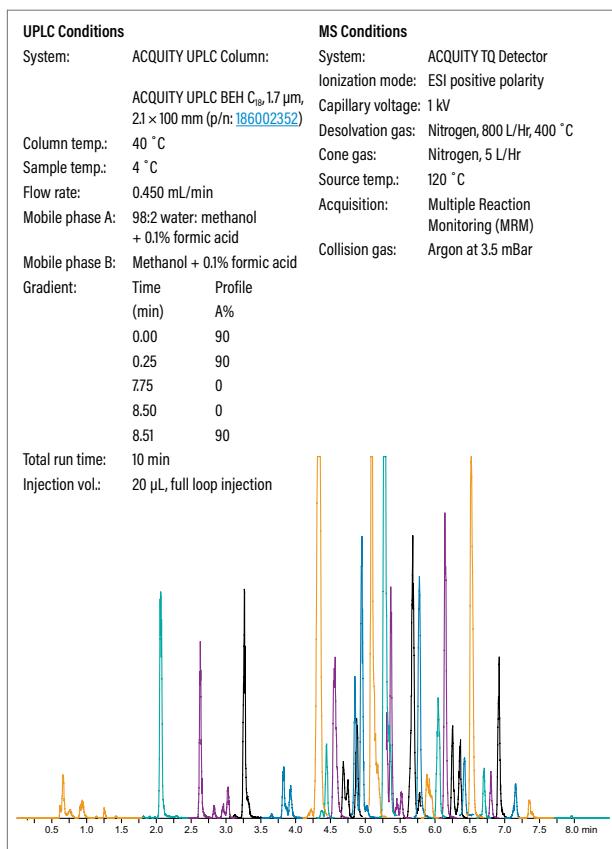

DisQuE KITTED SOLUTIONS

Complete solutions and kitted methods add value to your laboratory function by addressing the need for simple, easy-to-follow protocols that require very little training.

Waters offers several different versions of pre-packaged QuEChERS kits which conform to both AOAC and CEN protocols.

402 Pesticide Residues at 10 ppb ng/g In One 10-Minute Run

DisQuE Extraction and Cleanup Tubes and Pouches

DisQuE Extraction and Cleanup Tubes and Pouches are available separately for customized applications and method development. The salts contained in the 50 mL tubes are also available in a pouch format for greater flexibility. The cleanup tubes are available in a standard 2 mL size as well as a 15 mL size for sample enrichment.

Waters/Pall Life Sciences Sample and Solvent Filtration Products

Filtration of samples and solvents is a preventative maintenance procedure that saves lab time and money. Filtration provides immediate protection for the components of column and instrumentation by minimizing down time.

Waters/Pall Life Sciences Filters have been certified for compliance, which means they have been designed and developed to assist customers in complying with their regulatory and quality objectives.

Waters carries a broad range of Pall Life Sciences Filter Products, a range of different membranes for solvent and sample compatibility, and a variety of devices for various filtration applications.

Literature References

Title	Literature Code
The First LC-MS Certified Filter with Extremely Low Levels of Extractables	720007168EN
Acrodisc wwPTFE Syringe Filters Versus Syringe Filters with Hydrophilic Polypropylene (GHP) Membranes White Paper	720007171EN

Choosing the Right Filter for Your Application

To choose the right filter, you need to consider sample characteristics, volume, pore size; and decide if the sample may require prefiltration because it is laden with particulate matter.

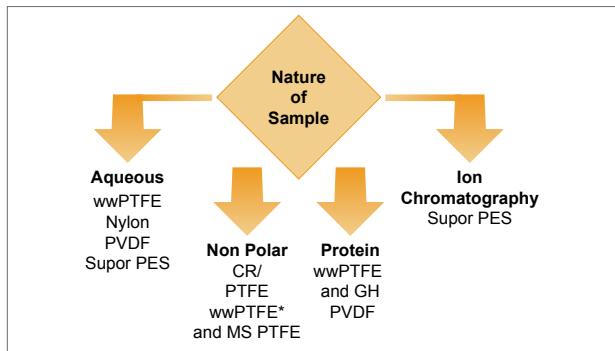

Membrane Choices

- **Acrodisc MS wwPTFE Syringe Filters:** Designed specifically to extend the lifespan of LC columns used for LC-MS analyses without adding significant extractables and with minimal analyte adsorption. These filters are constructed with a water-wettable polytetrafluoroethylene (wwPTFE) membrane in high density polyethylene (HDPE) housings.
- **wwPTFE Acrodisks:** Water wettable, hydrophilic, polytetrafluoroethylene membranes are a "next generation", all-purpose, hydrophilic membrane for aqueous, acidic, basic, non-aggressive organic, and aggressive organic solutions. It offers low protein binding and low levels of UV-absorbing extractables.
- **Nylon Acrodisks:** This hydrophilic membrane works well with both aqueous and organic solvents. Nylon is particularly suitable for high-pH samples but should be avoided in any protein recovery applications.

- **wwPTFE Acrodisc GF and Nylon Acrodisc GF:** Designed with a glass fiber prefilter over the membrane for hard to filter samples laden with particulate matter
- **Glass Fiber (GF) Acrodisks:** Can be used alone or as a prefilter with another Acrodisc in series
- **Acrodisc PVDF (LC):** Hydrophilic polyvinylidene fluoride (PVDF) membranes good for aqueous and organic solvents
- **Acrodisc PTFE (CR):** Hydrophobic, polytetrafluoroethylene (PTFE) membranes are recommended for use with non-aqueous solvents. Organic-based, highly acidic or basic samples and solvents
- **Supor PES (IC) Filters for Ion Chromatography:** Polyethersulfone (PES) IC filters are certified to contain low ionic backgrounds for ion chromatography

Concerned about particulate matter in your sample?

Step 1: What is the nature of your sample?

*For samples with laden particulate that are difficult to filter, it is best to use a syringe filter with a glass fiber prefilter over the membrane. These are available in wwPTFE and Nylon.

Step 2: What micron size are the particles in the column you are using?

Column	Pore Size of Filter
>3 µm	0.45 µm
<3 µm	0.20 µm

Step 3: What is the volume of your sample?

Volume	Acrodisc Size	Hold Up Volume
<2 mL	4 mm	<10 µL
<10 mL	13 mm minispike	<14 µL
<10 mL	13 mm male Luer	<30 µL
<100 mL	25 mm	<100 µL

Example 1: 1.5 mL of aqueous sample to be filtered for injection on a 5 µm column

Step	Question	Answer	Choice
1	Sample	Aqueous	GHP and others
2	Column's particle size	5 µm	0.45 µm
3	Volume	1.5 mL	13 mm or 25 mm

Choice: Membrane 0.45 µm wwPTFE Acrodisc in 4 mm or larger. You can also use the Nylon, PVDF or Supor PES (other choices of hydrophilic membranes under the aqueous sample path). In terms of device size, if you are injecting only a few µL of sample on the column, you can use any device size. The 13 and 25 mm Acrodics have hold up volumes of at most 100 µL, leaving plenty of filtered sample for the application.

Test Methods: The data presented in this chart is a compilation of testing by Pall Corporation with certain chemicals, manufacturer's data, or compatibility recommendations from the Compass Corrosion Guide by Kenneth M. Pruett. This data is intended to provide expected results when filtration devices are exposed to chemicals under static conditions for 48 hours at 25 °C (77 °F), unless otherwise noted. Membrane integrity for syringe filters was tested by bubble point.

This chart is intended only as a guide. Accuracy cannot be guaranteed. Users should verify chemical compatibility with a specific filter under actual use conditions. Because chemical compatibility is affected by many variables (including temperature, pressure, concentration, and purity), various chemical combinations prevent complete accuracy.

Caution: Alcohol residues that are allowed to dry on a filter may cause stress cracks. Pall Corporation recommends that filters used in alcohol processing should remain alcohol wet or should be flushed with copious quantities of water to remove residuals

prior to drying and subsequent reuse.

R = Resistant: No significant change was observed in flow rate or bubble point of the membrane. No visible indication of chemical attack was detected.

N = Not Resistant: The membrane or housing is basically unstable and is not recommended for use.

L = Limited Resistance: Moderate changes in physical properties or dimensions of the membrane were observed. The filter may be suitable for short term, non-critical use. Hardware or housing may be suitable for short-term exposure at low pressures and ambient temperatures.

— = Insufficient Data: Information is not available. Trial testing is recommended.

*wwPTFE GF and Nylon GF are glass fiber prefilters in combination with wwPTFE and Nylon filters for precipitate laden samples.

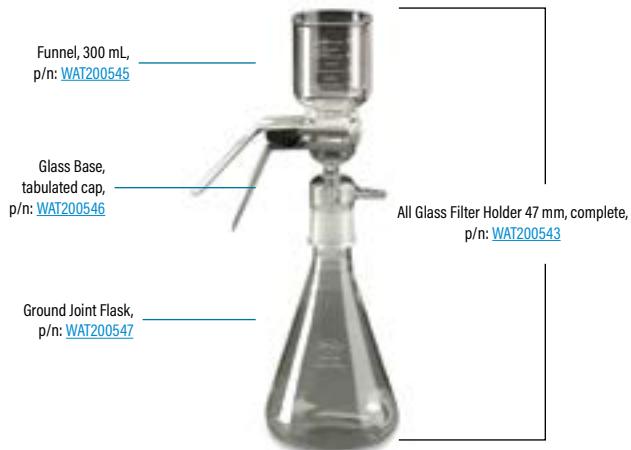

SOLVENT FILTRATION APPARATUS

The 300 mL capacity 47 mm Glass Filter Funnel and 1 L capacity 47 mm Glass Funnel/Support Assembly are ideal for vacuum filtration of liquids and degassing of HPLC solvent and mobile phases. The 100% borosilicate glass construction assures resistance to even the most aggressive solvents.

Liquid Handling Automations

Andrew 
the pipetting robot

FLEXIBLE AUTOMATION FOR THE CONNECTED LABORATORY

The Andrew+ robot and OneLab software is your modern, liquid-handling automation platform that is easy to set up, without the need for extensive programming or engineering experience.

Benefits of Andrew+ Pipetting Robot Include:

- **Reproducibility:** Automated pipetting minimizes error
- **Productivity:** Time freed up for higher level tasks. User choice of any combination of single/multichannel pipetting increases flexibility
- **Promoting Health:** Reduced repetitive movement and exposure to hazardous materials

ONE ROBOT—MANY APPLICATIONS

Single/Multichannel Pipetting	Flexible Working Deck	Small Footprint	OneLab Communication
<ul style="list-style-type: none">■ Best-in-Class Andrew Alliance electronic pipettes■ Manufactured by Sartorius■ Bluetooth communication with Andrew+	<ul style="list-style-type: none">■ Wide range of consumables■ Supported by an ever expanding range of domino accessories	<ul style="list-style-type: none">■ Compact multichannel pipetting robot■ Doesn't require dedicated space■ Easily located under a hood	<ul style="list-style-type: none">■ Intuitive design of pipetting protocols■ Execute OneLab protocols on Andrew+ through a WiFi/Ethernet connection■ Securely share protocols with other lab members

The Andrew+ robot executes OneLab protocols, enabling fully automated, traceable, and highly repeatable pipetting, in addition to an expanding range of more complex protocols.

General Liquid Handling

- Serial Dilution – OneLab calculates required volumes and concentrations, taking full account of sample viscosity and dilution of inhibitors/substances in the samples that can interfere with downstream analytics.
- Standard Curve – Create a series of standards of increasing concentration in order to produce a calibration curve.
- Concentration Normalization – OneLab, through its Normalization Wizard, and Andrew+ automates the production of concentration normalized volumes, typically saving time required for what is often a highly laborious exercise.
- Microplate Reformatting – Handle a wide range of aliquoting operations between different types of microplate, microtube, vials, and racked HPLC tubes.

General Sample Preparation

- Dilute and Shoot – Samples are diluted with an internal standard to be directly injected onto an LC-MS system.
- Protein Precipitation (PPT) – Methods to concentrate proteins and purify them from various matrices.
- Phospholipid Removal – One of the major causes of ion suppression in bio-analysis is phospholipids.
- Solid-Phase Extraction – With the Vacuum+ you can automate micro and macro elution SPE plates. Addition of the Ika pump allows for vacuum control.

Complex Workflows

There are a wide range of protocols available on onelab.andrewalliance.com for automation of more complex workflows that require liquid handling, SPE, heating/shaking, magnetic bead based separation and more. Protocol categories include:

- Bioanalysis
- Biopharmaceutical
- Biomedical Research
- Cell Biology
- Diagnostics
- Drug Discovery
- Food testing

APPLICATION AREA: Automated liquid handling in all the labs where transferring methods between devices

"Excellent product as easy to design and execute protocols. Minimizes human intervention and ensures compliance."

REVIEWER: Ningappa H M

ORGANIZATION: AIC ENTERPRICES PVT. LTD

SMARTER, REPRODUCIBLE AND TRACEABLE PIPETTING

Electronic pipettes made smart through connectivity. Using step-by-step visual guidance, Pipette+ allows you to execute protocols designed in OneLab with connected, electronic pipettes to minimize execution errors and provide full experimental traceability.

Benefits of Pipette+ Guided Pipetting System Include:

- **Reproducibility:** Volume and pipette parameters are set automatically, correct pipette selection confirmed, and usage monitored; all contributing to minimizing error
- **Productivity:** Researchers spend less time repeating experiments
- **Traceability:** Ensures systematic and accurate identification of sources of pipetting error

OneLab

- Intuitive graphical design of executable pipetting protocols.
- Step-by-step guidance of experiment protocols, ensuring repeatability.
- Facilitates sharing protocols with other researchers.

Pipette+ Stand

- Intelligent, computerized stand communicating with OneLab through Wifi/Ethernet and with pipettes by Bluetooth.
- Identifies and confirms correct pipette selection.
- Pipette parameters are set by OneLab. Correct use assured by real-time monitoring of pipette identity, performance and possible errors.
- Charges pipettes.

Andrew Alliance Pipettes

- Range of single channel (0.2 µL to 10 mL) and 8- and 12-channel electronic pipettes provides maximum flexibility of use.
- Pipette parameters are set automatically by OneLab while user conducts experiment.
- Lightest electronic pipettes on the market + electronic tip ejection = best-in-class ergonomics.

UNIQUE SOFTWARE FOR THE DESIGN AND EXECUTION OF LAB PROTOCOLS

OneLab is a browser-based software environment enabling researchers to design, share, and execute protocols, through an intuitive graphical interface. Use drag-and-drop to design new protocols on any PC or tablet from anywhere, whether you are in the lab or at your desk. You can also start with existing protocols, by selecting from the comprehensive OneLab library, enabling you to get up and running even faster. Executed step-by-step experiments with Pipette+ for manual, guided pipetting, or with Andrew+ and connected devices for a fully automated, walk-away solution.

Benefits of OneLab Laboratory Software Include:

- **Traceability:** Trace all steps from protocol design to experiment execution and report generation
- **Security and Data Privacy:** Ensures security of lab protocols through secure user identification and access control
- **Laboratory Management:** Seamless collaboration and training and the elimination of tedious manual procedures

APPLICATION AREA: Automated liquid handling in all the labs where transferring methods between devices

Sample Processing Devices and Accessories

SEMI-AUTOMATED SOLID PHASE EXTRACTION PROCESSING

The Otto™ SPEcialist Positive Pressure Manifold is designed to further improve method robustness and sample reproducibility for solid-phase extraction. Controlled by an interfaced tablet with easy-to-use software, the semi-automated Otto SPEcialist simplifies method development and transfer, positive pressure optimization, and real-time manipulation of pressure profiles while removing the variability of manual extraction systems. The Otto SPEcialist is compatible with μElution and macro elution plates; and 1 cc, 3 cc, and 6 cc cartridges.

Compatible SPE Devices:

- (1) μElution™ Plate
- (1) Macro Elution Plate
- (24) 1 cc Flanged/Flangeless Cartridges
- (96) 1 cc Flangeless Cartridges
- (24) 3 cc Flanged/Flangeless Cartridges
- (18) 6 cc Flanged/Flangeless Cartridges

Fit-for-Purpose Sample Vials for LC and LC-MS

Reduce risks and costs while increasing data quality by choosing the most reliable Waters vial for your LC analysis.

Vial Type	High Value Glass and Polypropylene	LCGC Certified	TruView™ pH Control LCMS Certified	QuanRecovery™ with MaxPeak™ HPS
Applications	Legacy methods and higher analyte concentrations. Optimize performance with glass surfaces that are not polarized.	High-throughput QC analysis in the regulated environment, for sample concentrations > 100 ppm.	LC-MS and routine QC analysis and quantification for sample concentrations below 100 ppm. Improved precision. Reduced adsorption of polar analytes.	Qualification and quantification of low abundant species with complex structures (e.g., proteins, peptides, nucleic acids).
Benefits	High value, low cost, longer cap and septum separations.	No UV-interferences from glass surfaces. No interaction with organic residues, or septa material.	For pH-sensitive compounds and ultrafilterable analytes. Improved precision with high vial-to-vial consistency.	High recovery and reproducibility after short-term storage. Improved precision for species with complex structures.
Features	Vials are assembled and tested for contaminants with a built-in vial integrity separator at 150 mbar dimensional check.	Coating-free, enhanced glass surfaces to reduce leaching of the analytical metal into solution with an anti-vibration community (<3 µm) and reduced adsorption effects.	For pH-sensitive compounds and ultrafilterable analytes. Improved precision with high vial-to-vial consistency.	Coating-free, modified polypropylene surface to reduce active sites, non-specific binding and hydrophilicity.
Certification Tests	• Dimensionally tested • Lot traceability	• pH certified • LC/MS certified • UHPLC-UV certified and tested	• pH certified • LC/MS certified • MS certified cap and septa • UHPLC-UV certified and tested	• Protein recovery QC tested • Dimensionally tested
