Waters™

Waters bioprocess walk-up solutions unlock access to high quality process and product data with just a few clicks, even for users with little knowledge of mass spectrometry. Providing streamlined integration of automated sample preparation and LC-MS analytics simplifies, accelerates and advances your bioprocess development.

Waters bioprocess walk-up solutions are controlled through Waters OneLab™ Software; providing a single workflow approach designed specifically for ease of use. You simply load your samples onto the Andrew+™ Pipetting Robot and select the desired analytical protocol from one of the pre-tested workflows available. Upon completion of the automated sample preparation, the purposefully developed BioAccord™ LC-MS System will seamlessly acquire and process the samples, delivering high quality results. Why wait? With our bioprocess walk-up solutions you can kick back and let the system work for you!

- Improve process understanding and develop more robust manufacturing processes with a streamlined integrated analytical solution
- Reduce costly delays and eliminate human errors with automated sample preparation and data transfer
- Automate routine product quality and spent media analyses to simplify and accelerate your bioprocess development
