

KF Application Note No. K- 39

Title: Water in penicillin-G-potassium

Summary: The water content of penicillin is determined according to Karl Fischer using a special solvent mixture in order to prevent unwanted side reactions.

Sample: Penicillin-G-potassium

Sample Preparation: none

Instruments and Accessories: 701 KF Titrino, 720 KFS Titrino or 758 KFD Titrino, 703 Titration Stand, printer

Analysis: Pour ca. 30 mL methanol into the titration vessel, add 5 g salicylic acid and condition the mixture. Then add ca. 1 g sample and start the water determination.

Reagents:

Solvent: methanol + salicylic acid

Titration: Hydranal Composite 5 (Riedel-de Haën)

Settings: 701 KF Titrino
