

TOY20DAD 800 VEX

SCANNING UV-VIS DETECTOR

is an UV (UV-VIS) diode array detector, which allows measuring absorbance of **four wavelengths simultaneously** in **external cell connected by optical cables**, just as measuring of **whole spectrum (scan)**. More wavelengths are used in liquid chromatography **to verify purity of analyzed samples** or in situations when some substances absorb on different wavelengths. It is possible to use the detector in **flash and preparative** applications.

It is possible to control the detector **manually by keyboard and display** but also by using **RS232, USB or LAN**. On the rear panel are available **four analog outputs** and connector for I/O logical input and output signals.

The unit's DAD (diode array detector) design offers many advantages:

- absorbance measuring on four wavelengths simultaneously
- wavelength setting in increments of 1nm
- on line scan of whole spectrum with speed up to 20 Hz which allows to create 3D picture

- lamp work hours are counted **using the built-in counter** for both deuterium and halogen lamps
- **SMA connectors at front panel** allows easy connection of external cell
- powering by 100-240 V AC
- unit can be controlled by **RS232, USB, LAN** or keyboard
- **signals are available in analog and digital form**
- **easy service and diagnostic** using display and keyboard or by service SW
