Our 3-year warranty is available to all customers. All new instruments will include repair for 3 years.

1

DMA 501/DMA 1001

DMA 501 and 1001 are entry-level digital density meters for the lab and quality checks at the production line and storage facilities. Speed up the measurement of pasty, inhomogeneous, sedimenting, and particle-containing samples.

- 3-digit and 4-digit digital density measurement from the market leader
- Filling volume determination of packages by mass to volume conversion
- QC near the production line

2

Abbemat 3100/Abbemat 3200

Both Abbemat refractometers from Anton Paar deliver refractive index measurements, ensuring the purity and composition of cosmetic ingredients. The 2 models can measure complex formulations and multi-component mixtures.

- Suitable for various sample types from liquids to highly viscous substances
- Robust design ensures long-term reliability and performance
- Simplified operation reduces training time and potential for errors

3

DMA 35

Take DMA 35 with you at all times and measure the density and concentration of your sample directly on-site. One portable density meter replaces all the glass hydrometers in your workplace and gives you the accuracy required from a lab instrument.

- Incoming raw material control in the warehouse
- Leak-proof sealed housing to withstand rough conditions
- Protection class IP54
