

WASSON·ECE  
INSTRUMENTATION

Engineered Solutions,  
Guaranteed Results.

# Introducing the Wasson-ECE Analytical Engineering Group

## History

Wasson-ECE Instrumentation has been providing quality solutions to the world for over 30 years. Industry leaders recognize that Wasson-ECE is a reliable partner capable of successful project implementation. Years of experience in developmental gas chromatography have evolved into an understanding of custom analytical systems. Our products span across a variety of industries and can be found in more than 45 countries around the globe.

## A Proven Record

Analytical engineering requires a solid foundation and extensive experience. With these two assets, Wasson-ECE is able to provide depth of project understanding, direct communication, and time management resulting in thousands of successfully completed projects and satisfied customers world wide.

## Project Definition

Adequate project definition is critical. Wasson-ECE analytical engineers are trained to understand objectives, appreciate variables, define benchmarks, evaluate performance tests, and work with clients as a team.

## A Strong Team

We are not just systems integrators. At Wasson-ECE we have a multi-disciplinary team available to construct your custom solution. We have chemical, mechanical, electrical, and software engineers on staff.

## Strategic Partner

Over the past 30 years, Wasson-ECE has cultivated the partnerships required to make your project succeed. From machining to sheet metal to software and robotics, we have the resources to fulfill any need that a project dictates.

# Guaranteed Results

A highly experienced engineering team will guide the definition stages of a project. Our integrated team works closely with the client to outline project needs in detail. Success relies upon flexibility. At Wasson-ECE, we specialize in projects that require new, innovative solutions. If the project need is not commercially available, Wasson-ECE will engineer the solution and guarantee the results.

## Our capabilities include, but are not limited to:

- Fluid handling
- Analyzer communications
- Electronic pressure control
- Automation
- Ceramic refractories
- Auto-samplers
- Instrument enclosures
- Membrane extraction systems
- Air pollution systems
- Custom software
- Shelters
- Tracer detection
- Micro-reactors
